## 1.0 General Descriptions

### 1.1 Introduction

The E088AWR1 R0 is a Color Active Matrix Liquid Crystal Display. The matrix uses a-Si Thin Film Transistor as a switching device. This TFT LCD has a 8.8 inch diagonally measured active display area with HD resolution (1,280 horizontal by 480 vertical pixels array).

### 1.2 Features

- Supported HD Resolution
- LVDS Interface
- Wide View Angle
- Compatible with RoHS Standard

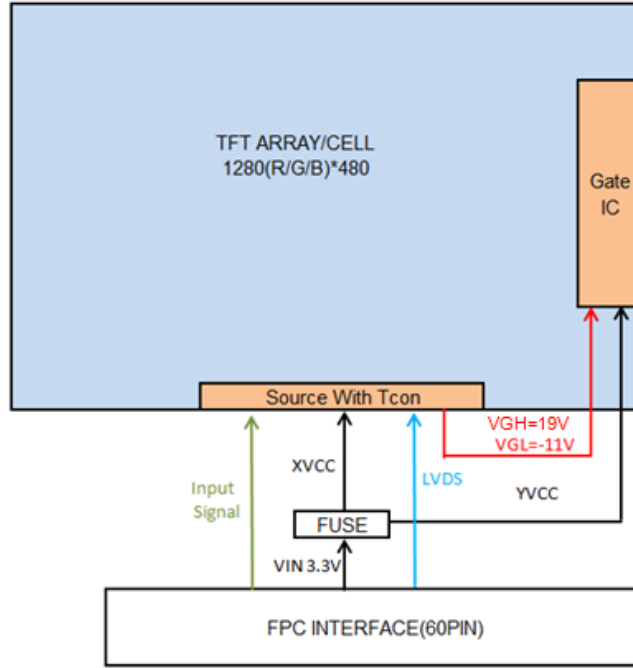

### 1.3 Product Summary

## 2.0 Absolute Maximum Ratings

**Table 1 Electrical & Environment Absolute Rating**

Item	Symbol	Min.	Max.	Unit	Note
Logic Supply Voltage	$V_{DD}$	-0.3	4.0	V	(1),(2), (3),(4)
Logic Input Signal Voltage	$V_{Signal}$	-0.3	3.9	V	
Operating Temperature	$T_{gs}$	-30	85	°C	
Storage Temperature	$T_a$	-40	90	°C	

Note (1) All the parameters specified in the table are absolute maximum rating values that may cause faulty operation or unrecoverable damage, if exceeded. It is recommended to follow the typical value.

Note (2) All the contents of electro-optical specifications and display fineness are guaranteed under Normal Conditions. All the display fineness should be inspected under normal conditions. Normal conditions are defined as follow: Temperature: 25°C, Humidity: 55± 10%RH.

Note (3) Unpredictable results may occur when it was used in extreme conditions.  $T_a$ = Ambient Temperature,  $T_{gs}$ = Glass Surface Temperature. All the display fineness should be inspected under normal conditions.

Note (4) Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be lower than (57.8)°C, and no condensation of water. Besides, protect the FOG from static electricity.

	White x		0.320		-	
	White y		0.341		-	
NTSC	-	68	75	-	%	

Note (1) Measurement Setup:

The FOG should be stabilized at given ambient temperature (25°C) for 30 minutes to avoid abrupt temperature changing during measuring. In order to stabilize the luminance, the measurement should be executed after lighting backlight for 30 minutes in the windless room.

## 4.2 Signal Electrical Characteristics

### 4.2.1 Signal Electrical Characteristics For LVDS Receiver

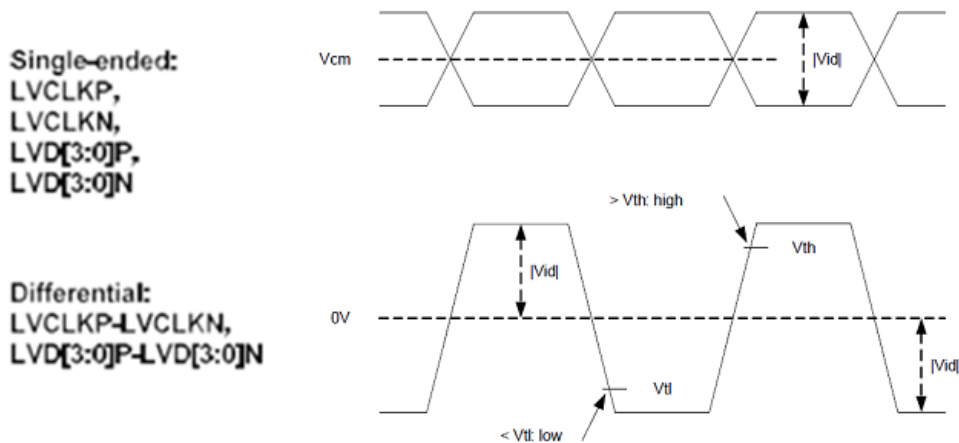

The built-in LVDS receiver is compatible with (ANSI/TIA/TIA-644 ) standard.

**Table 5 LVDS Receiver Electrical Characteristics**

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Differential Input High Threshold	$V_{th}$	100	-	-	mV	$V_{CM}=+1.2V$
Differential Input Low Threshold	$V_{tl}$	-	-	-100	mV	$V_{CM}=+1.2V$
Magnitude Differential Input	$ V_{ID} $	150	-	600	mV	-
Common Mode Voltage	$V_{CM}$	0.45	1.2	$1.7- V_{ID} /2$	V	-

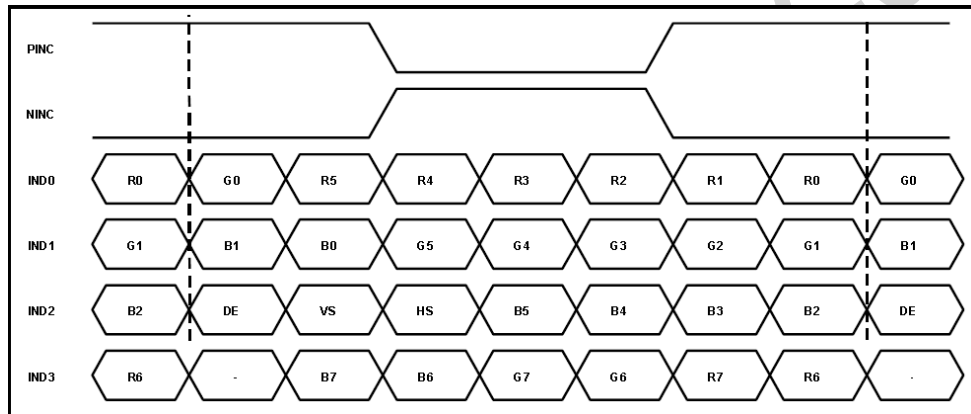

Note (1) Input signals shall be low or Hi- resistance state when VDD is off.

Note (2) All electrical characteristics for LVDS signal are defined and shall be measured at the interface connector of LCD.

#### 4.4 Input Power Specifications

Input power specifications are as follows.

**Table 7 Input Power Specifications**

Parameter	Symbol	Min.	Typ.	Max.	Unit	Note
LOGIC :						
Power Supply Input Voltage	VDD	3.0	3.3	3.6	V	(1),(3)

Power Supply Inrush Current	IDD_P	-	-	1000	mA	(4)
Logic Input Signal High Level Voltage	VIH	0.7*VDD		VDD+0.3	V	(5)
Logic Input Signal Low Level Voltage	VIL	0		0.3*VDD	V	(5)

Note (1) All of the specifications are guaranteed under normal conditions. Normal conditions are defined as follow: Temperature: 25±2°C

Note (2) All of the absolute maximum ratings specified in the table, if exceeded, may cause faulty operation or unrecoverable damage.It is recommended to follow the typical value.

Note (3) The specified V<sub>DD</sub> current and power consumption are measured under the V<sub>dd</sub> = 3.3 V, FV= 60)Hz condition and White pattern.

Note(4) The below figures are the measuring VDD condition.

The Vdd condition is same as the minimum of T1 at Power on sequence.

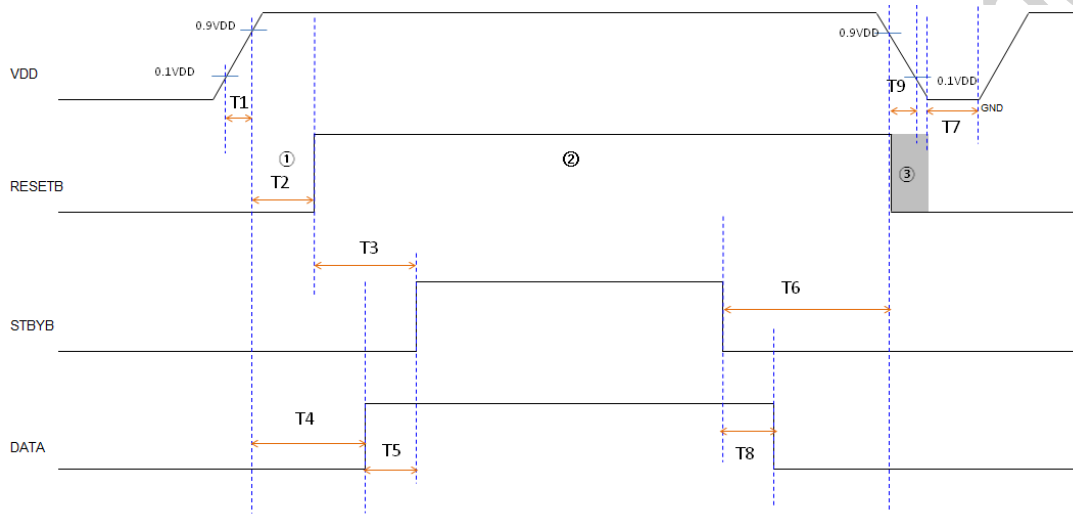

**Figure 13 V<sub>DD</sub> Rising Time**

Note (5) Logic input signal include TB,RL, ATREN,BIST,SELB.

#### 4.5 Power ON/OFF Sequence

- Interface signals are also shown in the chart. Signals from any system shall be Hi-resistance state or low level when VDD voltage is off.
- When system first start up, should keep the VDD high time longer than 200ms, otherwise may cause image sticking when VDD drop off.
- RESET has 3 status in the sequence: ① Pull Low Voltage status ② Pull High Voltage Status ③ Hi-Z status. Please make sure RESET change to Hi-Z status while module is shutting down.

## 6.0 Reliability Conditions

**Table 10 Reliability Condition**

Item	Package	Test Conditions		Note
High Temperature/High Humidity Operating Test	FOG	$T_{gs}=60^{\circ}\text{C}$ , 90%RH, 500hours		(1),(2),(3),(4)
High Temperature Operating Test	FOG	$T_{gs}=85^{\circ}\text{C}$ , 500 hours		
Low Temperature Operating Test	FOG	$T_a=-30^{\circ}\text{C}$ , 500hours		
High Temperature Storage Test	FOG	$T_a=90^{\circ}\text{C}$ , 500 hours		(1),(3),(4)

		Air	$\pm 4\text{KV}$ , 150pF(330Ohm)	

Note (1) A sample can only have one test. Outward appearance, image quality and optical data can only be checked at normal conditions according to the IVO document before reliable test. Only check the function of the FOG after reliability test.

Note (2) The setting of electrical parameters should follow the typical value before reliability test.

Note (3) During the test, it is unaccepted to have condensate water remains. Besides, protect the FOG from static electricity.

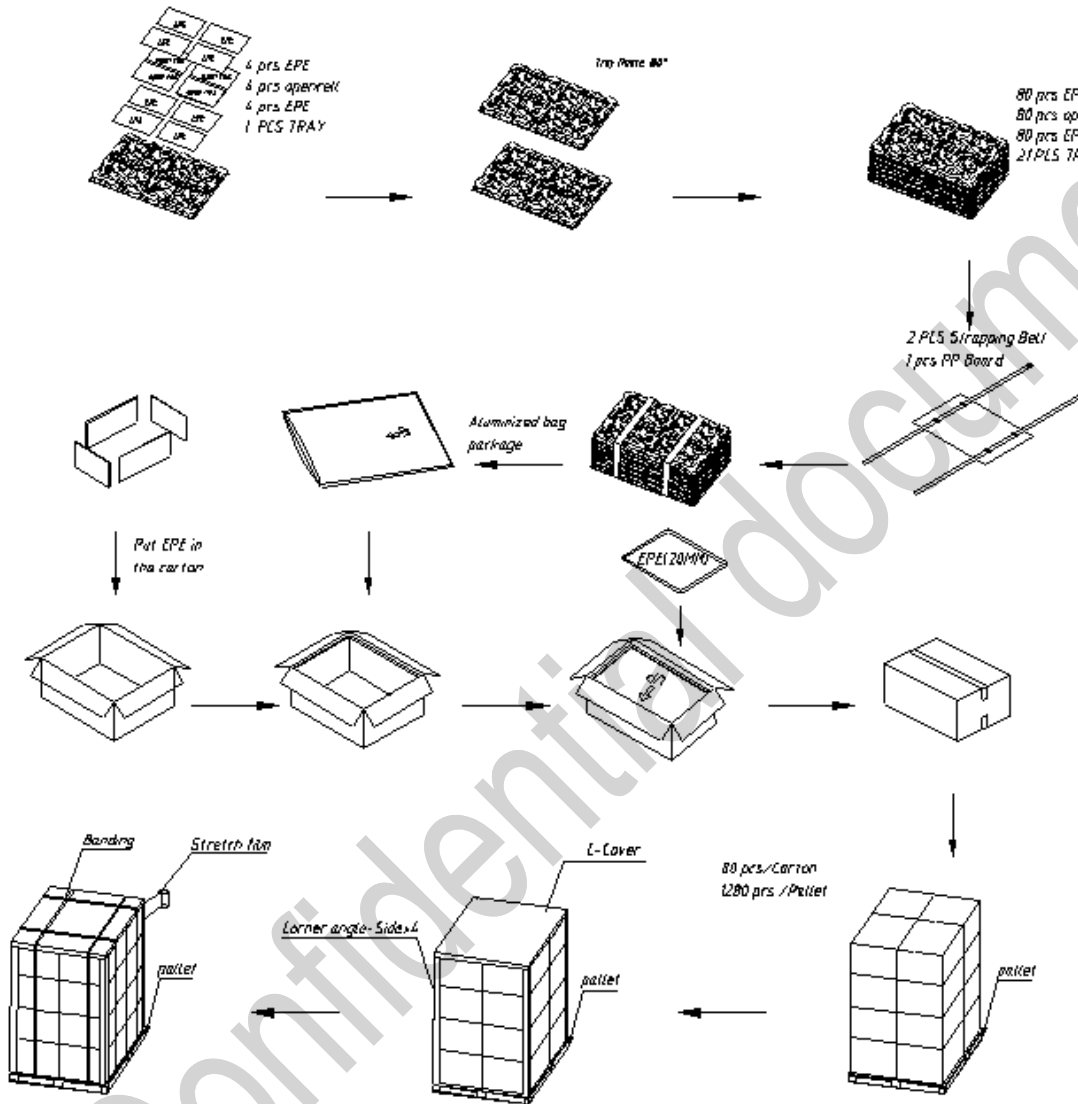

Note (4) The sample must be released for 24 hours under normal conditions before judging.

Furthermore, all the judgment must be made under normal conditions. Normal conditions are defined as follow: Temperature:  $25^{\circ}\text{C}$ , Humidity:  $55\pm 10\%\text{RH}$ .  $T_a$ = Ambient Temperature,  $T_{gs}$ = Glass Surface Temperature.

Note (5) It could be regarded as pass, when the FOG recovers from function fault caused by ESD a few minutes later.

## 9.0 General Precaution

### 9.1 Using Restriction

This product is not authorized for using in life supporting systems, aircraft navigation control systems, military systems and any other appliance where performance failure could be life-threatening or lead to be catastrophic.

### 9.2 Operation Precaution

(1) The FOG product should be operated under normal conditions.

Normal conditions are defined as below:

Temperature: 25°C

Humidity: 55±10%

Display pattern: continually changing pattern (Not stationary)

(2) Brightness and response time depend on the temperature. (It needs more time to reach normal brightness in low temperature.)

(3) It is necessary for you to pay attention to condensation when the ambient temperature drops suddenly. Condensate water would damage the polarizer and electrical contacted parts of the FOG. Besides, smear or spot will remain after condensate water evaporating.

(4) If the absolute maximum rating value was exceeded, it may damage the FOG.

(5) Do not adjust the variable resistor located on the FOG.

(6) Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding may be important to minimize the interference.

(7) Image sticking may occur when the FOG displayed the same pattern for long time.

(8) Do not connect or disconnect the FOG in the "power on" condition. Power supply should always be turned on/off by the "power on/off sequence"

(9) Ultra-violet ray filter is necessary for outdoor operation.

### 9.3 Mounting Precaution

(1) All the operators should be electrically grounded and with Ion-blown equipment turning on when mounting or handling. Dressing finger-stalls out of the gloves is important for keeping the panel clean during the incoming inspection and the process of assembly.

(2) It is unacceptable that the material of cover case contains acetic or chloric. Besides, any other material that could generate corrosive gas or cause circuit break by electro-chemical reaction is not desirable.

(3) The case on which a FOG is mounted should have sufficient strength so that external force is not transmitted to the FOG directly.

(4) It is obvious that you should adopt radiation structure to satisfy the temperature specification.

(5) So as to acquire higher luminance, the cable of the power supply should be connected directly with a minimize length.

(6) It should be attached to the system tightly by using all holes for mounting, when the FOG is

assembled. Be careful not to apply uneven force to the FOG, especially to the PCB on the back.

(7) A transparent protective film needs to be attached to the surface of the FOG.

(8) Do not press or scratch the polarizer exposed with anything harder than HB pencil lead. In addition, don't touch the pin exposed with bare hands directly.

(9) Clean the polarizer gently with absorbent cotton or soft cloth when it is dirty.

(10) Wipe off saliva or water droplet as soon as possible. Otherwise, it may cause deformation and fading of color.

(11) Clean the panel gently with absorbent cotton or soft cloth when it is dirty. Ethanol( $C_2H_5OH$ ) is allowed to be used. Ketone (ex. Acetone), Toluene, Ethyl acid, Methyl chloride, etc are not allowed to be used for cleaning the panel, which might react with the polarizer to cause permanent damage.

(12) Do not disassemble or modify the FOG. It may damage sensitive parts in the FOG, and cause scratches or dust remains. IVO does not warrant the FOG, if you disassemble or modify the FOG.

#### 9.4 Handling Precaution

(1) Static electricity will generate between the film and polarizer, when the protection film is peeled off. It should be peeled off slowly and carefully by operators who are electrically grounded and with Ion-blown equipment turning on. Besides, it is recommended to peel off the film from the bonding area.

(2) The protection film is attached to the polarizer with a small amount of glue. When the FOG with protection film attached is stored for a long time, a little glue may remain after peeling.

(3) If the liquid crystal material leaks from the panel, keep it away from the eyes and mouth. In case of contact with hands, legs or clothes, it must be clean with soap thoroughly.

#### 9.5 Storage Precaution

When storing FOG as spares for long time, the following precautions must be executed.

(1) Store them in a dark place. Do not expose to sunlight or fluorescent light. Keep the temperature between  $5^{\circ}C$  and  $35^{\circ}C$  at normal humidity.

(2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

(3) It is recommended to use it in a short-time period, after it's unpacked. Otherwise, we would not guarantee the quality.

#### 9.6 Others

When disposing FOG, obey the local environmental regulations.
